

In the Specification:

On page 7, lines 10-15, please amend the disclosure to read as follows:

p1
The line guide (15), shown in Fig. 5 as a vertically extending elongated ring, has a width Y, designated as (14), that is less than the width of the line-holding channel (26). It is thought that the keeping the width Y of the line guide (15) in the range of about $\frac{3}{8}$ to about $\frac{5}{8}$ of the width of the line channel (26) will be suitable for Applicant's reel and will be sufficient to reduce the incidence of line backlash and tangling commonly associated with employing pitching and flipping casting methods with revolving spool casting reels.
